Palm Beach 2 - awning and side wall for caravans and campers

- Robust awning with 240 cm depth
- Side walls optionally in two different widths
- Connection with 5 + 8 mm keder profile
- Including diagonal bars against "water bag" in the dome roof

① **Palm Beach 2 2.6 - width 260 cm** Chic and robust awning for your caravan, with sewn piping profile. Also suitable for VW Transporter with Multirail or similar keder rail. The two set-up rods supplied as well as two diagonally running fiberglass rods ensure a stable arching of the sun canopy upwards - against the formation of a water bag in the dome roof. **Scope of delivery:** Sun canopy, 2 erection poles, 2 diagonal poles, ground nails and guy ropes

900151 159,-

② **Palm Beach 2 3.0 - width 300 cm** The length of 3 meters is ideal for the VW Transporter with long wheelbase. With sewn-on keder profile suitable for vehicles with Multirail or similar keder rail. For vehicles with rain gutter we recommend as adapter to the keder profile our double keder rail, Art.No. 90120. **Scope of delivery:** Sun canopy, 3 erection poles, 2 diagonal poles, ground nails and guy ropes

900152 179,-

Matching side panels for Palm Beach 2 2.6 and 2 3.0.

The mesh window provides privacy with maximum air permeability and can be closed by covering if required. The side wall is attached to the sun canopy with the top edge by Velcro and braced to the ground. Can be mounted on the left or right. The width of the side wall allows the sliding bus door to open unimpeded. **Scope of delivery:** side wall, ground pegs, guy ropes

③ **Side wall for Palm Beach 2 2.6**

Weight: ca. 2.2 kg.

Dimensions: W 225 x H 180 cm

Sportlite Air 320

- Also suitable for motorhomes
- Spacious living space with annex possibility (optionally available)
- 280HDE fabric: high density, weatherproof, lightweight
- Dynamic, intelligent overpressure valve system
- Single inflation (single inflation point)
- Front panels zip out
- Zip-out left and right side doors with mesh inserts
- Transparent PVC windows
- Adjustable webbing guy system

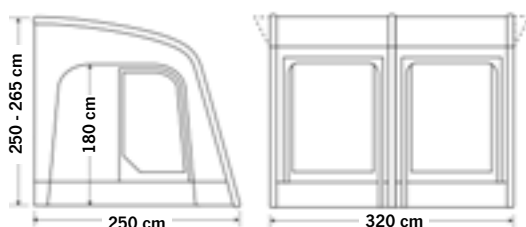

Lightweight caravan / motorhome air awning. New Single Inflation technology allows sections of the air frame to be connected and then isolated with air-lock valves. This breakthrough system offers absolute ease of inflation and deflation and gives you the confidence that each part of the structure can be isolated from the other parts of the air frame.

Scope of delivery: tent with air tubes, pump, windbreak, pegs, guy ropes, storm bracing and carrying bag.

Winter awning Cortina 3
for caravan

- Gesrods with quick release
- Good insulation due to climate canopy
- 2 separate doors in the side walls
- Breathable side walls
- Winterproof roof
- Winter or summer - the right choice for every season

The all-season awning CORTINA 3 is suitable for summer and winter. The walls are breathable, the sturdy roof is winterproof and the steel frame is robust. The awning is equipped with a large window in the front and windows in the side walls. Included are curtains in white for all windows and a hook-in climate canopy in gray for a homey ambiance and good insulation. The front wall can be opened in all directions with the 4-way zipper, completely removable or used as a porch function. Pressure bars and sewn-on foam beads ensure draught-free sealing to the caravan and are completed by the wind skirt.

Scope of delivery: Tent skin, steel poles with Quick Lock padset, climate canopy, curtains, windbreak, wheel guard, storm guy ropes, pegs.

How do I measure the circumferential dimension

If you don't know the turnaround dimension of your caravan, you have three options for determining it:

- Look in your supplied brochure or in the technical data of your caravan
- Contact your caravan manufacturer and ask for your turnaround dimension by specifying model and year of construction
- Measure yourself - the safest method The caravan should stand horizontally on a level surface to measure the circumferential dimension of your caravan. You measure from guy point A (ground) through the keder strip of the caravan, with a non-stretchable cord to guy point B (ground). If the keder rail still bends inward at the bottom end, you must measure perpendicular to the ground or remove the cord from the rail at the insertion point.

Important for aerodynamic caravans:

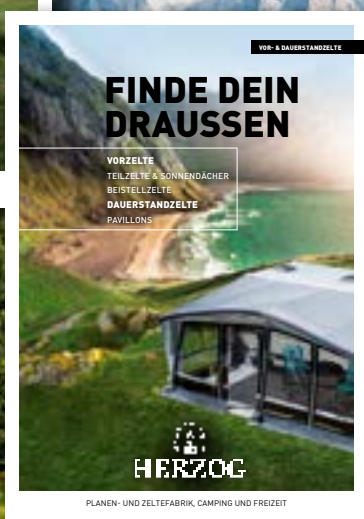

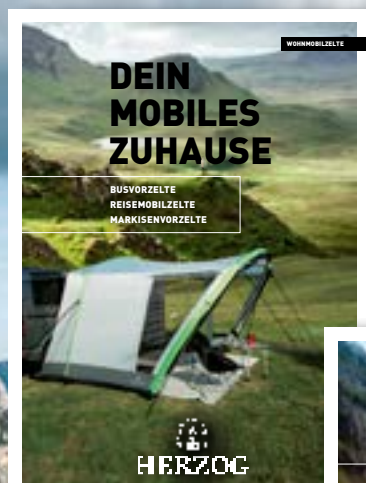

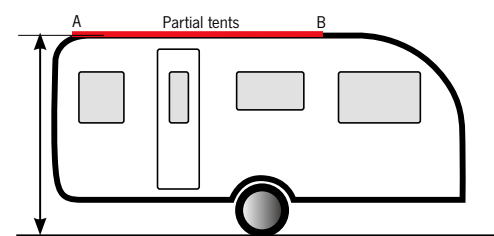

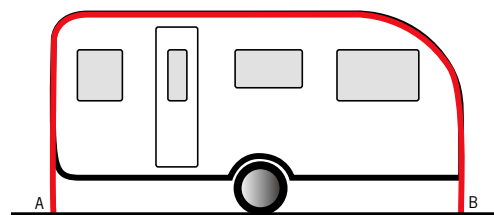

In the case of caravans with an extremely sloping bow, you must already measure perpendicular to the ground from a height of ca. 185 cm (so you are no longer following the rail).

This determined value is the circumferential dimension. Point A and B are likewise the guy points of your awning.

If the circulation dimension of your caravan is at one of the edges of the awning size specifications, you should opt for the smaller awning size. The size selection of your caravan awning is based solely on the circulation dimension. Only the depth of the tent remains a free choice.

Attachment of the roof bars to the caravan.

- With wall eyelets, firmly screwed (seal drill holes well)! We advise this variant for partial tents. The rear corners of the roof are fixed and do not shift even in stronger crosswinds. Wall eyes are also a good choice for permanent camping.
- With screwless Vario clips! These are pushed onto the inner piping. The advantage of this variant is the flexibility in the choice of mounting points. The clip is connected to the tent roof and can not fall when the pressure on the pole decreases.

**Gable profiles for protective tarpaulins**

The gable profiles for motorhomes and caravans facilitate the drainage of water from your protective cover or roof cover and prevent or reduce possible puddles of water. Suitable for any caravan / motorhome roof, can also be combined with existing protective covers from Hindermann. The gable height of about 26 cm overhangs the skylights and antennas. The 2-part gable profile is made of weather-resistant, rigid PE foam. It is put together in the center and stabilized with 4 feet each. The placement and the number of spacer profiles are made according to the respective requirements.

Content: 2 pieces (only available in pairs, can also be used for roof protection tarpaulin).

Package length: only about 120 cm, assembled size about 210 x 26 x 5 cm

928640**99,-****Caravan bow cover Wintertime**

Winding aid for caravan and motorhome cover

Practical help to get canopies or shelters over the caravan
Telescopic 71 - 120 cm, material: aluminum, with hook.

903075 9,95

**Caravan canopy -
for caravan up to 230 cm width**

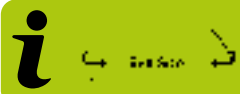

- Reliable weather protection
- Caravan tarpaulin waterproof and breathable
- Partial cover for better ventilation: reduction of mold risk
- Made of high-strength 3-ply SFS fabric 160 g/m²
- Waterproof and UV resistant

Caravans are exposed to the weather - especially when the vehicles are parked outdoors. Precipitation and intense sunlight, but also dust, dirt, bird droppings or tree resins leave their mark over time and impair not only the appearance of the vehicles, but also their service life.

A caravan cover is inexpensive to purchase and provides reliable protection . . The paint of your vehicle remains thereby maintained and does not weather - and also your upholstery materials in the interior are protected by the caravan cover from fading. Color: Grey

Belt measurement: Important for determining the size, please take into account bike racks and overhangs.

Caravan protective cover Premium

- Reliable, water repellent weather protection
- Roof made of Tyvek-like breathable material in white for optimal UV protection
- Both sides can be opened by zipper
- Good ventilation, reduction of mold risk
- Made of tear-resistant and durable 3-ply SFS fabric: roof 125 g/m², Sides 100 g/m²

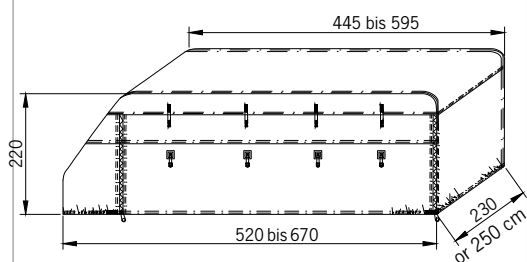

Breathable and weatherproof protective cover maintains the value of your caravan. Both side walls are easily opened by zipper and allow access to the caravan.

Up to 230 cm or 250 cm width

Suitable for caravans with length from 520 to 670 cm

Caravan protective cover - for caravan up to 230 or 250 cm width

- Reliable weather protection
- Flexible to open with zipper on all 4 corners
- Protective hood winterproof and breathable at the same time
- Good ventilation, reduction of mold risk
- Made of high-strength 3-layer SFS fabric: 160 g/m²
- Waterproof and UV resistant

With this breathable protective cover you protect your caravan from UV radiation, mold, water, dirt, dust, and other Weather influences. The roll-up side walls allow access at any time.

Tire protection cover Reflex - For cars, caravans and motorhomes

The cover has a reflective front surface to keep out the UV rays that damage the tire, so the heat effect is less. The cover rests on the tread and can not slip down. The incorporated piping gives shape and support. Built-in eyelets for ground nails serve for secure fastening.

**Window awnings for the caravan**

- With solar filter
- Simple construction
- Suitable for almost all caravans
- Various ventilation options
- Easy assembly
- No scratching of the handles

The mesh fabric reflects the sun's rays, the view from inside remains clear. **Material** Net fabric, Zinox linkage construction for stern and bow windows

190 cm	93595	156,-
215 cm	935951	175,-

**Thermal mat for caravan window**

- Protection from heat in summer
- Protection from cold in winter

The thermal film for solar reflection, cold and heat protection is characterized by low weight and durability. The standard textile piping (Ø 7.0 mm) makes it easy to pull into the piping rail. The film is edged all around with a dark blue polyester tape and the corners are rounded. Equipped as standard with two fastening options: Press studs and eyelets.

Camping Tent Know How

The tent skin:

Synthetic fiber or cotton?

For travel tents today, modern synthetic fiber fabrics have become almost the exclusive choice because of their excellent waterproofing and stability combined with low weight and pack size. Their disadvantage is the lower breathability (exception acrylic fabric) and poorer light resistance, but this is of little consequence in the usual use as a vacation tent. To increase the light fastness, the fabrics can be provided with a UV protective coating.

Nylon Taffeta (Polyamide)

Extremely light and strong fabric. (Taffeta = English name for taffeta = fabric made of chemical threads). The quality is indicated in threads per square inch (190T=190 threads per square inch). 190T/70D additionally denotes the fiber thickness of 70D. (D = denier, measure of thread strength for man-made fibers). Nylon is very light (often only 78g/m²). It becomes even more waterproof due to special coating.

Nylon PU coated

(Polyurethane coating). Polyurethane coats the fiber and prevents water from penetrating the fabric. Polyamide with aluminum coating improves the reflection of the sun's rays. Depending on the coating, the water column ranges from 400 to 10,000 mm. Disadvantage: In the sun, nylon material strongly contracts. Durability against ultraviolet radiation (sun) is not very good. In the rain or cold, the material stretches.

Nylon Ripstop

Nylon fabric with woven reinforcements. More stable, much more tear-resistant and more expensive. The elongations of the material during temperature fluctuations are considerably lower. It is paper-thin and very stable.

Polyester UV resistant

Extremely stable and hardly any wear. Long shelf life. Comparatively resistant to solar radiation. Low water absorption, moisture remains on the surface of the material and hardly penetrates into the fiber. Very fast drying.

Polyester PU coated (coated)

Even more water repellent and extremely fast drying.

Polyester with silicone coating

Water beads off even more and does not penetrate the fabric at all.

Polyester Ripstop

Polyester fabric with reinforced "grid inserts", particularly tear-resistant. Oxford polyester, for example, 150D. Woven polyester fibers more stable and tear resistant. Used for extremely high quality tents. Reimo tents are mainly made of ripstop polyester or oxford polyester. For long durability with low weight

PE or polyethylene

For tent floors or septic strips. Long, thin "plastic veins" are woven and laminated with liquid polyethylene from both sides. Abrasion and mildew resistant, UV insensitive.

PVC fabric

Extremely heavy, waterproof and resistant fabric, partly used for tent roofs or lazy strips.

Cotton

Breathable, allows water and air to pass through. Moisture is absorbed, the individual fibers swell and the fabric becomes dense. Cotton usually only achieves an impermeability of about 300 mm water column. Because of its heavy weight, sensitivity and long drying time, it is now rarely used.

Polycotton

Breathable blended fabric of polyester and cotton. Lighter and more water repellent than pure cotton. But compared to polyester considerably heavier and not so waterproof.

Acrylic

Modern hi-tech synthetic fiber fabric with the breathability similar to cotton tents. Used only on very high quality tents (e.g. series on Isabella tents).

Seam taping - Seam Taping

The synthetic fiber fabrics initially leak at the seams. To seal polyester tents, special, high-quality PU sealing tape is pressed onto the inside of the seams under heat and pressure. This makes them completely water repellent. In case of damage can be sealed with liquid seam sealants. For nylon tents (usually double-roof

tents), seam sealing is not as critical. They are sewn with polyester threads with cotton sheathing, which swells and seals. With cotton tents, the seam itself usually swells.

Flame retardancy

Tent fabrics are naturally sensitive to fire. To improve the properties, they can be coated flame retardant.

Condensation water tightness

Modern fabrics are usually extremely waterproof. This results in the humidity of the breathing air or room air condensing on the interior walls. The only remedy is good ventilation options. The rule is: the greater the temperature difference between outside and inside, the more ventilation is required. The effect can also be reduced by using a thermal canopy made of cotton fabric, which can store moisture and thus has a balancing effect.

The tent poles:

Steel linkage

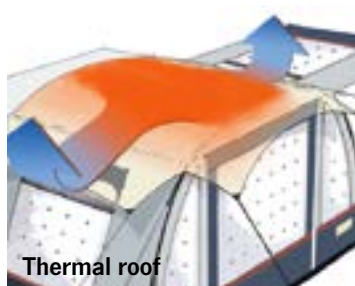

Very stable. In simple version only painted, better protection against rust provides galvanizing. Very good stiffening of the corner angle tent parts by rubber, cords or chains is important. Color markings or numbering make it easier to set up.

Aluminum linkage

About 50% lighter than steel. For sufficient stability, usually to be dimensioned stronger than steel rods. Stowage volume is about the same.

Fiberglass poles

Use in modern dome or tunnel tents. Manufacture from fibers glued with resin. Highly flexible, elastic and always returning to the starting position. Bars of any length can be assembled from individual elements. Elastic rope connections facilitate the assembly. Extremely durable, heavier than aluminum.

Thermal roof

High venting

Aluminum linkage

Carbon linkage

Aluminum poles for high tech tents

Use for special high altitude tents. Mostly made of aircraft aluminum, high strength and very light. Because of the high material costs, its use is only worthwhile where particularly low weight or very high strength are required.

Air hoses No more fiddling with linkage parts. The tent is erected quickly and easily by inflating the air tubes integrated in the tent skin.

Tent components:

Guy lines

Should have a light color so that they are visible in the dark. Ideal are leashes with reflective stripes woven into them, which reflect light in the dark like cat's eyes.

Zipper covers

Hardly any zipper is waterproof. Therefore, they should be covered with a fabric flap, which can be fixed with Velcro.

Tent windows

Windows with mosquito netting provide good ventilation, but must be closed when it rains if the cover cannot be stretched over them for protection. Blinds over the windows protect the rolled-up cover from dirt and water. Curtains in front of the large clear windows protect their privacy. Choose between tents with tinted or clear windows.

Set-up poles

Most tents are supplied with additional pitching poles. These allow front or side doors to be set up as awnings.

Quality is the sum of good details

Steel rod

Inflatable tents - the new generation of modern camping

The advantages of an inflatable tent - pitching the tent has never been easier!

The tent can be set up or taken down by one person, although it is a spacious family tent or tunnel tent. The inflatable awning is inflated and ready for use in no time; no fiddling with poles strictly according to instructions, no buckling of tent poles during storms. Just take the air pump or special electric pump, inflate 7 psi pressure and the tent stands stable and reliable for the coming days. In case of pressure loss, simply pump again.

Attach the freestanding awning to the roof rail or piping. Stretch a few more storm lines and an-

chor the tent storm-proof with the guy ropes and pegs. The compact dimensions are also practical, because without linkage camping luggage automatically becomes more manageable.

Last but not least, the waterproof, tear-resistant materials make our tents a robust, reliable vacation companion. Should the unusual event of a leak occur in the rod air chambers, they are both easily patchable and replaceable.

Both hoses and the sheathing provided can withstand hard use without any problems.

Inflating the air duct
